UDH4 - Underdesk/Desktop Computer Cage

The storage and protection solution.

Introducing the UDH4, the horizontal underdesk or desktop computer tower cage designed to secure and protect your PC.

These units are produced in the UK to our highest quality manufacturing standards and offer a safe and robust storage solution for many types of computer.

The UDH4 is manufactured from 1.5mm steel and is supplied complete with two 3mm thick locking bars and two keyed alike padlocks. The units have been painted in tough black powder coat to ensure that they are able to withstand the knocks and bumps associated with day to day use in any busy environment.

The units have been designed with security in mind, that's why the fixings face inwards towards the centre of the unit. Once fixed to the desk and a PC is installed it is not possible to access the screws and hence you can be sure that the UDH4 will remain where you fit it.

Another benefit to the UDH4 is that it is height adjustable which allows the unit to suit many CPU models and enables it to be used on desks with a front bar as shown in the adjacent picture.

The units have been manufactured with ventilation holes on both sides; this ensures good airflow around your CPU to prevent overheating whilst it is in use.

The dimensions for each UDH4 are 510mm long (front to back), 410mm wide (side to side) and 122mm-162mm adjustable internal height. The locking bars are approximately 435mm in length.

We are also able to offer these units for custom applications and in other sizes. Front and rear blocking/masking or door options are available as specials upon request. On large quantities we are able to offer colour options or other modifications please contact us for further details.

All units are supplied boxed. Please note that we do not supply fixings as these will need to be specific for the type of table or desk that is to be used.
